Bài 2:

```
abstract class Shape {
    abstract void draw();
    private String Color = "red";
    public String getColor() {
        return ~~this~~ color;
    }
}

class Rectangle extends Shape {
    @Override
    public void draw() {
        System.out.println("Rectangle" ~~+super.color~~
                                    +super.getColor());
    }}
```

```
class Circle extends Shape {
    @Override
    public void draw() {
        System.out.println("Circle" ~~+super.color~~
                                    + super.getColor());
    }
}

class ShapeApp {
    public ~~void~~ static void main(String[] args) {
        Rectangle hcn = new Rectangle();
        Circle tron = new Circle();
        hcn.draw();
        tron.draw();
    }
}
```
